

ABSTRACT OF THE DISCLOSURE

A trap (10) for insects, vermin, and similar subjects is described. The trap includes a container (12) having a volume (26), an opening (28) into the volume, and a whisker assembly (14). The whisker assembly is located at the opening and extends into
5 the volume, allowing subjects to enter the volume, but not exit the volume. In one embodiment, the whisker assembly includes a plurality of nonmetal flexible strands (30) arranged in a conical manner. The bases of the strands are located at the opening. The tips of the strands are located near one another. In another embodiment, the container has a top portion (20) and a bottom portion (22). The bottom portion includes the volume
10 and the opening. A light assembly (18) is attached to the top portion, directly adjacent the opening in the bottom portion, and includes an LED that emits blue light onto the opening.
